CLOSURE CERTIFICATION BY QUALIFIED PROFESSIONAL ENGINEER

I certify that the AEP Mitchell Bottom Ash Pond has been closed in accordance with the most recent written closure plan specified by 40 CFR 257.102(b) and the requirements of 40 CFR 257.102.

Closure Completion Notification for Closure by Removal

January 15, 2025
Closure Completion Notification
Mitchell Plant
Bottom Ash Pond

On December 24, 2024, the Mitchell Plant Bottom Ash Pond was transitioned to closure status in accordance with 40 CFR 257.102. This notice of completion of closure is being placed in the operating record in accordance with 40 CFR 257.102(h).

Effective with the Closure Completion Notification, the former ash storage site is no longer a CCR unit. The following operating record documents are no longer required going forward:

- Hazard Potential Classification
- Emergency Action Plan (EAP)
- Face to Face Meeting Documentation for EAP
- History of Construction and Revisions for Surface Impoundments
- Structural Stability Assessments
- Safety Factor Assessments
- Fugitive Dust Plan
- Inflow Design Flood System Control Plan

March 8, 2023
Document Number: APO087.0003

VERDANTAS CERTIFICATION

Based on the construction observations performed by Verdantas representatives, I hereby certify that the Bottom Ash Pond West Basin at the Mitchell Plant in Moundsville, West Virginia, as shown on the record drawing located in Appendix C, has achieved removal of all CCR material and soil with constituent concentrations above relevant background standards (i.e., closed by removal) in substantial compliance with the Construction Quality Assurance (CQA) Plan for Pond Closure and Repurposing, the Construction Drawings for the CCR/ELG closure by removal project, Bottom Ash Pond Closure and Repurposing Contract as provided by Worley (December 3, 2021) and as per 40 CFR 257.102, and as clarified herein. The groundwater monitoring and compliance aspect of CCR Unit closure by removal criteria, as found at 40 CFR 257.102(c), will be certified under a separate report. The Contractor (R.B. Jergens) obtained the survey data used to develop the record drawing. R.B. Jergens verified that the elevations met the closure requirements, and Verdantas also reviewed the survey data.

April 4, 2024
Document Number: APO087.0006

VERDANTAS CERTIFICATION

Based on the construction observations with associated photographic records, testing performed by Verdantas representatives in the field and documented in this report, I hereby certify to the best of my knowledge and to the extent of available information that the East Wastewater Pond at the Mitchell Plant in Moundsville, West Virginia, as shown on the record drawing located in Appendix B, has achieved removal of all CCR material and one foot (minimum) of underlying native soil in substantial compliance with the Construction Quality Assurance (CQA) Plan for Pond Closure and Repurposing, the Construction Drawings for the CCR/ELG Project, the Bottom Ash Pond Closure and Repurposing Contract as provided by Worley (December 3, 2021), per 40 CFR 257.102 and as clarified herein. The groundwater monitoring and compliance aspect of CCR Unit closure by removal criteria, as found at 40 CFR 257.102(c), will be certified under a separate report. This certification is strictly limited to CQA observations and associated field testing and does not include an engineering analysis of previously approved and permitted engineering designs or subsequent approved design/field changes. The Contractor (R.B. Jergens) obtained the survey data used to develop the attached record drawing. R.B. Jergens verified that the elevations met the construction requirements, and Verdantas also reviewed the survey data.

Attachment E – Hydrology and Hydraulic Report

1.0 OBJECTIVE

This report was prepared by AEP- Geotechnical Engineering Services (GES) section to fulfill requirements of the CCR rule section 257.73(c)(1).

2.0 DESCRIPTION OF CCR THE IMPOUNDMENT

The Mitchell Bottom Ash Pond Complex is located at the Mitchell Power Plant in Marshall County, West Virginia. The impoundment was constructed in 1977 and is comprised of a Bottom Ash Pond and a Clear Water Pond. The purpose of the pond is for the disposal of Bottom Ash produced at the Mitchell Power Plant.

The complex is surrounded by the Mitchell Power Plant on its north side, West Virginia State Route 2 on its east side, the adjacent wallboard facility and ancillary structures on its south side, and the metal cleaning tank, railroad tracks, and the Ohio River on its west side. The Bottom Ash Pond Complex is approximately 17 acres in size and consists of two impounding facilities, the Bottom Ash Pond which is approximately 10 acres, and the Clear Water Pond which is approximately 7 acres. The Bottom Ash Pond comprises the north portion of the complex and the Clear Water Pond comprises the southern portion. The Mitchell Bottom Ash Complex is regulated by the West Virginia Division of Water and Waste Management (WVDWWM) as a Hazard Class "2" Structure.

The Bottom Ash Pond is separated into ponding areas in its western and northeastern portions. In general, the bottom ash is sluiced into the northeastern portion of the pond; where after, the sluice water is routed through an interior splitter dike to the western portion of the pond. Flow though the western portion of the pond is routed around three interior flow diversion dikes. The southeastern portion of the Bottom Ash Pond is above the normal operating pool (pond) level and is used as an excavation and loadout area for bottom ash.

The Bottom Ash Pond and Clear Water Pond were constructed partially as incised ponds and partially using raised dike construction. Specifically, the pool level on the east side of the pond complex is generally below the bottom elevation of the east dike. The inside slopes of the Bottom Ash Pond and Clear Water Pond are lined with a composite soil and PVC liner.

3.0 SUMMARY OF OWNERSHIP 257.73(c)(1)(i)

[The name and address of the person(s) owning or operating the CCR unit: the name associated with the CCR unit: and the identification number of the CCR unit if one has been assigned by the state.]

The Mitchell Power Plant is located at 8999 Energy Road, Gate 3, Moundsville, WV 26041. The Mitchell Bottom Ash Pond Complex is equally owned by Wheeling Power Company and Kentucky Power Company (KPC) and it is operated by KPC. The WVDWWM ID number is 05108.

4.0 LOCATION OF THE CCR UNIT 257.73 (c)(1)(ii)

[The location of the CCR unit identified on the most recent U.S. Geological Survey (USGS) 7 ½ minute or 15 minute topographic quadrangle map, or a topographic map of equivalent scale if a USGS map is not available.]

A location map is included in Attachment A.

5.0 STATEMENT OF PURPOSE 257.73 (c)(1)(iii)

[A statement of the purpose for which the CCR unit is being used.]

The Bottom Ash Pond is a surface impoundment for the purpose of disposal and storage of bottom ash. Bottom Ash is settled and stored until it is removed and landfilled. The pond also receives other plant miscellaneous waste streams.

6.0 NAME AND SIZE OF WATERSHED THE CCR UNIT IS LOCATED 257.73 (c)(1)(iv)

[The name and size in acres of the watershed within which the CCR unit is located.]

The Bottom Ash Pond Complex is located with the Upper Ohio Wheeling watershed (HUC: 05030106) which has a listed acreage of approximately 962,298 acres. The Bottom Ash Pond Complex is a diked impoundment where the only inflows are from plant process water. There is no stormwater run-on from an offsite watershed.

7.0 DESCRIPTION OF THE FOUNDATION AND ABUTMENT MATERIALS 257.73(c)(1)(v)

[A description of the physical and engineering properties of the foundation and abutment materials on which the CCR unit is located.]

The foundation materials of the Bottom Ash Pond complex consist primarily of loose to very dense sands and gravels with N-values ranging from 3 to 50. Foundation and abutment soil properties were determined from a subsurface investigation. The following properties of the foundation materials were determined from laboratory testing:

Moist Unit Weight: 120 pcf
Saturated Unit Weight: 130 pcf
Coehsion: 0 psf
Friction Angle: 34 degrees

8.0 DESCRIPTION OF EACH CONSTRUCTED ZONE OR STAGE OF THE CCR UNIT 257.73 (c)(1)(vi)

[A statement of the type, size, range, and physical and engineering properties of the materials used in constructing each zone or stage of the CCR unit; and the approximate dates of construction of each successive stage of construction of the CCR unit.]

The Bottom Ash Pond complex was originally constructed in 1977. The original design drawings show the embankment being constructed of earthen fill with the lower portion of the impoundment excavated into the existing ground (incised). The embankment has an approximate top width of 20 feet. The crest of the Bottom Ash Pond is at elevation 690 feet-msl and the Clear Water Pond is approximately 675 feet-msl. The tallest section of embankment is approximately 19 feet at north and west embankments of the Bottom Ash Pond. The inboard and outboard slopes were constructed with a 3 horizontal to 1 vertical slopes. On top of the dike there is a gravel access road used for maintaining and operating the impoundment. There have been no successive raisings of the impoundment. A

subsurface investigation describing the engineering properties of the embankment soils is included in Attachment B and design drawings are included in Attachment C.

9.0 ENGINEERING STRUCTURES AND APPURTENANCES, 257.73 (c)(1)(vii)

[At a scale that details engineering structures and appurtenances relevant to the design, construction, operation, and maintenance of the CCR unit, detailed dimensional drawings of the CCR unit, including a plan view and cross sections of the length and width of the CCR unit, showing all zones, foundation improvements, drainage provisions, spillways, diversion ditches, outlets, instrument locations, and slope protection…]

Bottom ash is sluiced into the Bottom Ash Pond via sluice lines which are supported by a wooden truss structure at the northeast portion of the pond. Overflow from the western portion of the Bottom Ash Pond is conveyed to the Clear Water Pond via a concrete overflow shaft and a 30-inch diameter reinforced concrete pipe to a 30-inch diameter perforated distribution pipe in the Clear Water Pond. The Clear Water Pond was constructed using both incised pond and diked pond construction methods. In general, the pool levels along the southern and eastern sides of the Clear Water Pond are primarily incised. The inside slopes of the Bottom Ash Pond and Clear Water Pond are lined with a PVC liner overlaid by soil as recommended to prevent seepage. Overflow from the Clear Water Pond is conveyed through an overflow tower into a 36-inch diameter reinforced concrete pipe through the embankment and then a series of 36-inch diameter corrugated metal pipes which discharge into a riprap-lined channel leading to the Ohio River. Other plant process water is sent to the bottom ash pond though piping and valve structures located on the embankment. Detailed dimensional drawings are included in Attachment C.

Primarily the inboard slopes are protected by grass, aggregate or a layer of bottom ash. The outboard slopes primarily consist of grass vegetation.

There are four piezometers located within the dike. A map with instrumentation locations in provided in Attachment D.

10.0 SUMMARY OF POOL SURFACE ELEVATIONS, AND MAXIMUM DEPTH OF CCR, 257.73 (c)(1)(vii)

[…in addition to the normal operating pool surface elevation and the maximum pool elevation following peak discharge from the inflow design flood, the expected maximum depth of CCR within the CCR surface impoundment.]

The Bottom Ash Complex has been determined to be a Significant Hazard potential CCR impoundment. Based on this hazard classification the design flood is determined by section 257.82(a)(3) to be the 1000-year storm which corresponds to 7.10 inches in 24 hours for this site taken from NOAA Atlas 14. An analysis was performed which demonstrates the Bottom Ash Complex can safely pass the 1/2 PMP (Probable Maximum Precipitation), which is equivalent to 13.45 inches in 6 hours and therefore exceeds the requirements of section 257.82(a)(3). The complete analysis is included in Attachment E.

	Bottom Ash Pond	Clear Water Pond
Normal Pool Elevation	676.0	664.0
Maximum Pool Elevation following peak discharge from design flood (1/2 PMP)	683.51	666.5
Expected Maximum depth of CCR within impoundment	30 ft	Trace amount

11.0 FEATURES THAT COULD ADVERSELY AFFECT OPERATION DUE TO MALFUNCTION OR MIS-OPERATION 257.73 (c)(1)(vii)

[…and any identifiable natural or manmade features that could adversely affect operations of the CCR unit due to malfunction or mis-operation]

In the event of malfunction or mis-operation of any of the pond's appurtenances the ponds operations could be adversely affected. These structures include the outlet spillway structures located in the Bottom Ash Pond and Clear Water Pond and influent sluicing piping and structures. See design drawings in Attachment C for location and details of all appurtenances.

12.0 DESCRIPTION OF THE TYPE, PURPOSE AND LOCATION OF EXISTING INSTRUMENTATION 257.73 (c)(1)(viii)

[A description of the type, purpose, and location of existing instrumentation.]

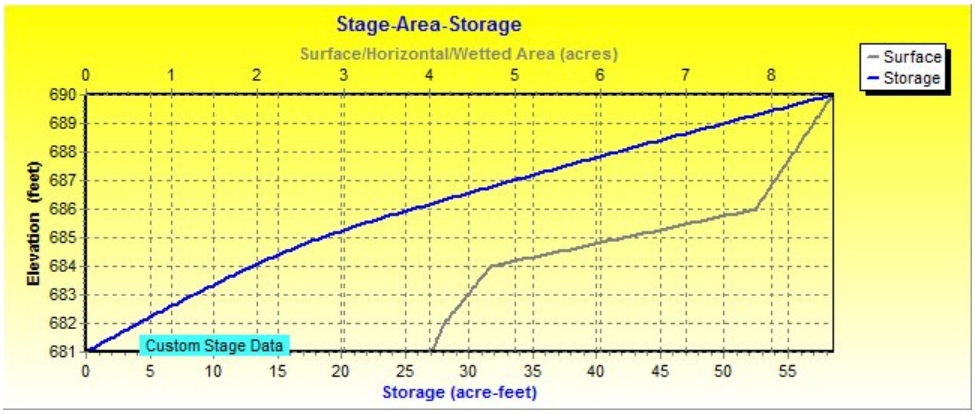
The Bottom Ash Pond complex has 4 piezometers located within the dam. These piezometers are read a minimum of every 30 days for the purpose of determining the phreatic water level within the dike. A location map is provided in Attachment D.

13.0 AREA – CAPACITY CURVES FOR THE CCR UNIT 257.73 (c)(1)(ix)

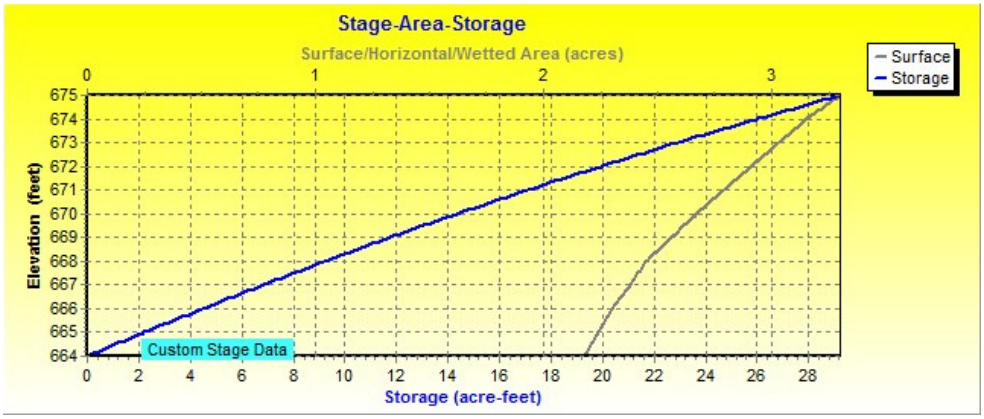
[Area-capacity curves for the CCR unit.]

The area capacity curves for the Bottom Ash Pond Complex are shown below:

Bottom Ash Pond



Clear Water Pond



14.0 DESCRIPTION OF EACH SPILLWAY AND DIVERSION 257.73 (c)(1)(x)

[A description of each spillway and diversion design features and capacities and calculations used in their determination.]

Overflow from the western portion of the Bottom Ash Pond is conveyed to the Clear Water Pond via a concrete overflow shaft and a 30-inch diameter reinforced concrete pipe to a 30-inch diameter perforated distribution pipe in the Clear Water Pond. Overflow from the Clear Water Pond is conveyed through an overflow tower into a 36-inch diameter reinforced concrete pipe through the embankment

and then a series of 36-inch diameter corrugated metal pipes which discharge into a riprap-lined channel leading to the Ohio River. Detailed dimensional drawings are included in Attachment C. Capacities and Calculations are included in Attachment E. Drainage is diverted around the Bottom Ash Pond Complex by natural drainage channels and grass lined ditches.

15.0 SUMMARY CONSTRUCTION SPECIFICATIONS AND PROVISIONS FOR SURVEILLANCE, MAINTENANCE AND REPAIR 257.73 (c)(1)(xi)

[The construction specifications and provisions for surveillance, maintenance, and repair of the CCR unit.]

Construction of the Bottom Ash Pond Complex was completed around 1977. Original construction specifications are unavailable. Original design drawings are included in Attachment C. A subsurface investigation detailing the constructed soil material of the embankment is included in Attachment B.

As required by the CCR rules the Bottom Ash Pond is inspected at least every 7 days by a qualified person. Also as a requirement of the CCR rules the impoundment is also inspected annual by a professional engineer. Maintenance items are addressed as they are discovered as part of those inspections.

16.0 RECORD OR KNOWLEDGE OF STRUCTURAL INSTABILITY 257.73 (c)(1)(xii)

[Any record or knowledge of the structural instability of the CCR unit.]

To date there has been no known record or knowledge of structural instability of the CCR unit.

GENERAL NOTES

ALL TIMBER TO BE DOUGLAS FIR OR SOUTHERN YELLOW PINE, SELECT STRUCTURAL. SIZES IN ACCORDANCE WITH AMERICAN LUMBER STANDARDS.

ALL TIMBER TO BE CREOSOTED. CREOSOTING TO CONFORM TO SPEC. AWPA C-2. LATEST REVISION.

ALL STEEL INCLUDING BOLTS AND WASHERS TO BE A36 STEEL. AND ALL TO RECEIVE ONE FIELD COAT OF BITUMASTIC PAINT.

ALLOWABLE SOIL BEARING PRESSURE 1500 PSF BACKFILL AROUND POSTS AND BRACING SHALL BE WELL COMPACTED.

FOR CONCRETE NOTES SEE DWG. 12-3424E.

FOR STRUCTURAL STEEL NOTES SEE DWG. 12-3424C.

FOR STRUCTURAL STEEL NOTES SEE DWG. 12-3424C.

GENERAL NOTES

FOR TIMBER NOTES SEE DWG. 12-3429A.

STRUCTURAL STEEL

ALL STRUCTURAL STEEL AND WORKMANSHIP SHALL CONFORM TO THE A.I.S.C. SPECIFICATIONS.

ALL SHOP CONNECTIONS SHALL BE RIVETED OR WELDED UNLESS NOTED.

ALL FIELD CONNECTIONS SHALL BE BOLTED UNLESS NOTED.

ALL FIELD BOLTS ARE TO BE SHIPPED WITH THE STRUCTURAL STEEL.

ALL RIVETS AND BOLTS SHALL BE 3/4" DIAMETER UNLESS NOTED.

THE FABRICATOR SHALL PREPARE BOLT LISTS AND FURNISH FIVE COPIES TO THE PURCHASER.

WHERE FIELD WELDS ARE CALLED FOR LEAVE AN AREA OF 2" AROUND WELDS FREE OF PAINT. DO NOT PAINT STEEL IN CONTACT WITH CONCRETE.

WHEREVER WELDED CONNECTIONS ARE CALLED FOR THE WORK IS TO BE DONE IN ACCORDANCE WITH THE AMERICAN WELDING SOCIETY'S "CODE FOR WELDING IN BUILDING CONSTRUCTION."

ALL WELDS SHALL BE 5/16" FILLET WELDS UNLESS NOTED.

THE STEEL ERECTOR SHALL FURNISH REQUIRED AMOUNT OF WELDING OF RODS IN PROPER SIZES AND LENGTHS FOR THE FIELD ERECTION. ALSO SUFFICIENT NUMBER OF ERECTION BOLTS.

DO NOT PAINT STEEL IN CONTACT WITH CONCRETE.

PAINTING SPECIFICATIONS
SHOP PROCEDURES

STRUCTURAL STEEL

A) SURFACE PREPARATION: STEEL SHALL BE PREPARED FOR PAINTING IN ACCORDANCE WITH STEEL STRUCTURES PAINTING COUNCIL NO. 3 POWER TOOL CLEANING, SPECIFICATION (SSPC-SP-3-63) DATED OCTOBER 1, 1963, OR LATEST REVISION, OR BY BLASTING BY MEANS OF WHEELABRATOR EQUIPMENT.

B) SHOP COAT SPECIFICATIONS: APPLY AT A SPREADING RATE OF 400-450 SQUARE FEET PER GALLON ONE SHOP COAT OF READY MIXED RED LEAD BASE PAINT, CONFORMING TO FEDERAL SPECIFICATION TTP 86 E, TYPE 2 OR LATEST REVISION. DRY FILM THICKNESS SHALL BE A MINIMUM OF 2.0 MILS. MANUFACTURER SHALL CERTIFY IN WRITING THAT HE CONFORMS TO THE SPECIFICATION.

C) SUPPLIERS: PAINT SHALL BE PURCHASED FROM ANY ONE OF THE FOLLOWING APPROVED SUPPLIERS:
1. CON LUX PAINT PRODUCTS - EDISON, NEW JERSEY
2. DEBEVOISE PAINT COMPANY - BROOKLYN, NEW YORK
3. E. I. DUPONT DE NEMOURS - WYNNEWOOD, PENNSYLVANIA
4. GLIDDEN PAINT COMPANY - CLEVELAND, OHIO
5. HARRISON PAINT & VARNISH - CANTON, OHIO
6. KEELER & LONG COMPANY - WATERBURY, CONNECTICUT
7. O'BRIEN CORPORATION - SOUTH BEND, INDIANA
8. PATTERSON SARGENT COMPANY - NEW BRUNSWICK, NEW JERSEY
9. PPG INDUSTRIES - PITTSBURGH, PENNSYLVANIA
10. SHERWIN WILLIAMS COMPANY - CLEVELAND, OHIO

D) PAINT SHALL BE APPLIED IN ACCORDANCE AND CONFORMING TO THE CURRENT FEDERAL (OSHA), STATE AND LOCAL HEALTH AND SAFETY REGULATIONS.

ALL STEEL INCLUDING BOLTS AND WASHERS TO BE A36 STEEL, AND ALL TO RECEIVE ONE FIELD COAT OF BITUMASTIC PAINT.

GENERAL NOTES

FOR STRUCTURAL STEEL NOTES SEE DWG. 12-3424C.

CONCRETE NOTES

ALL CONCRETE MATERIALS AND WORKMANSHIP SHALL CONFORM TO THE A.E.P.S. CORP. SPECIFICATIONS 1000A.
DIMENSIONS GIVEN FOR REINFORCING STEEL ARE TO CENTER LINE OF BARS.
CONSTRUCTION JOINTS ARE NOT TO BE ADDED, OMITTED OR RELOCATED, EXCEPT WITH THE WRITTEN APPROVAL OF THE N.Y. OFFICE, AND FURTHER, PROVIDED THAT THE CONTRACTOR'S MIXING AND PLACING EQUIPMENT IS PROPERLY SIZED SO THAT NO COLD JOINTS WILL RESULT IN THE CONCRETE.
EXPANSION JOINTS MUST BE LOCATED AS SHOWN.
ALL EXPOSED EDGES SHALL HAVE A 3/4 INCH BEVEL.
FLOOR FINISH SHALL CONFORM TO THE A.E.P.S. CORP'S. SPEC. AND TYPE OF SAME WILL BE DECIDED UPON BY CONCRETE LABORATORY.
ALL EXPOSED VERTICAL EXTERIOR CONCRETE SURFACES TO HAVE RUBBED FINISH.

CONCRETE SHALL BE CAPABLE OF DEVELOPING A MINIMUM COMPRESSIVE STRENGTH OF 3000 PSI AT 28 DAYS.

REINFORCING BARS SHALL BE ASTM A615. GRADE 60. DEFORMED TYPE.

GRATING NOTES

GRATING SHALL BE RECTANGULAR TYPE WITH 3/16" BEARING BARS @ 1 3/16" CENTERS AND CROSS BARS @ 4" CENTERS. GRATING SHALL BE GALVANIZED.

GRATING SHALL BE SECURED BY FIELD WELDING TO SUPPORTING MEMBERS @ EVERY TENTH BEARING BAR & SHALL SPAN IN DIRECTION SHOWN ON PLAN THUS (——).

CCR RULES ASSESSMENT AND CERTIFICATION
MITCHELL POWER PLANT BOTTOM ASH COMPLEX
KENTUCKY POWER COMPANY
MARSHALL COUNTY, WEST VIRGINIA
DECEMBER 22, 2015

INTRODUCTION

Geo/Environmental Associates, Inc. (GA) has performed a site inspection, conducted an engineering assessment, and prepared a certification statement for the Mitchell Power Plant Bottom Ash Complex. These services were performed to meet specific requirements set forth in the Environmental Protection Agency's CCR Rules.[1] Provided in this report is a discussion of GA's findings and a certification statement pertaining to the facility. Field and laboratory data, engineering analyses, and a drawing are included in the appendices.

SITE DESCRIPTION

General

The Mitchell Bottom Ash Complex is equally owned by American Electric Power Generation Resources, Inc. and Kentucky Power Company (KPC) and it is operated by KPC to provide disposal capacity for bottom ash generated at the Mitchell Power Plant. AEPSC, based in Columbus, Ohio, provides engineering support for the Bottom Ash Complex. The Mitchell Bottom Ash Complex is located near Cresap in Marshall County, West Virginia at approximately latitude 39° 49' 30" and longitude 80° 48' 56".

The complex is surrounded by: (1) the Mitchell Power Plant on its north side, (2) West Virginia State Route 2 on its east side, (3) the adjacent wallboard facility and ancillary structures on its south side, and (4) the metal cleaning tank, railroad tracks, and the Ohio River on its west side. As shown on drawing sheet 1 in Appendix IV, the Mitchell Bottom Ash Complex consists of two impounding facilities: (1) the Bottom Ash Pond and (2) the Clear Water Pond. The Bottom Ash Pond comprises the north portion of the complex and the Clear Water Pond comprises the southern portion. The Mitchell Bottom Ash Complex is regulated by the West Virginia Division of Water and Waste Management (WVDWWM) as a Hazard Class "2" structure.

The Bottom Ash Pond is separated into ponding areas in its western and northeastern portions. In general, bottom ash is sluiced into the northeastern portion of the pond; where after, the sluice water is routed through an interior splitter dike to the western portion of the pond. Flow through the western portion of the pond is routed around three interior flow diversion dikes. The southeastern portion of the Bottom Ash Pond is above the normal operating pool (pond) level

(1) Environmental Protection Agency, 40 CFR Parts 257 and 261, "Hazardous and Solid Waste Management System; Disposal of Coal combustion Residuals from Electric Utilities; Final Rule," April 17, 2015

and is used as an excavation and loadout area for bottom ash. The Bottom Ash Pond was constructed partially as an incised pond and partially using raised dike construction. Specifically, the pool level on the east side of the pond is generally below the bottom elevation of the east dike (i.e., it is incised). The inside slopes of the Bottom Ash Pond are lined with a composite soil and PVC liner. The southern dike separates the Bottom Ash Pond and Clear Water Pond.

Overflow from the western portion of the Bottom Ash Pond is conveyed to the Clear Water Pond via a concrete overflow shaft and a 30-inch diameter reinforced concrete pipe to a 30-inch diameter perforated distribution pipe in the Clear Water Pond. The Clear Water Pond was constructed using both incised pond and diked pond construction methods. In general, the pool levels along the southern and eastern sides of the Clear Water Pond are primarily incised. Similar to the Bottom Ash Pond, the inside slopes of the Clear Water Pond are lined with a composite soil and PVC liner. Overflow from the Clear Water Pond is conveyed through an overflow tower into a 36-inch diameter reinforced concrete pipe through the embankment and then a series of 36-inch diameter corrugated metal pipes which discharge into a riprap-lined channel leading to the Ohio River.

Approximate Existing Conditions

A summary of the approximate existing conditions for the Mitchell Bottom Ash Complex is provided in List 1. A site plan view of the facility is included in Appendix IV.

LIST 1
SUMMARY OF APPROXIMATE EXISTING CONDITIONS
FOR MITCHELL BOTTOM ASH COMPLEX

Bottom Ash Pond Crest Elevation	690 feet, NAVD
Bottom Ash Pond Normal Operating Pool Level	681 feet, NAVD
Bottom Ash Pond Design Storm Level (1)	682.98 feet, NAVD
Bottom Ash Pond Bottom Level	660 feet, NAVD
Clear Water Pond Crest Elevation	675 feet, NAVD
Clear Water Pond Normal Operating Pool Level	664 feet, NAVD
Clear Water Pond Design Storm Level (2)	665.62 feet, NAVD
Clear Water Pond Bottom Level	645 feet, NAVD

Notes:

(1) The Bottom Ash Pond maximum design storm level is based on a normal operating pool elevation of 681 feet, NAVD and a pool increase of 1.98 feet during the 1/2 PMP 6-hour storm event.

(2) The Clear Water Pond maximum design storm level is based on a normal operating pool elevation of 664 feet, NAVD and a pool increase of 1.62 feet during the 1/2 PMP 6-hour storm event.

SITE INSPECTION

At the request of AEPSC, GA personnel performed a site inspection of the Bottom Ash Complex to observe and document the prevalent site conditions. Specifically, Seth W. Frank, P.E. (GA) performed a site inspection of the Bottom Ash Complex on July 14, 2015. It is GA's opinion that the Bottom Ash Complex is in good condition. Moreover, GA believes that the conditions observed, during the July 14, 2015, site inspection, are representative of the conditions modeled in the assessments and analyses provided in this report.

FIELD, LABORATORY, AND INSTRUMENTATION DATA

For reference, pertinent field and laboratory data for the Bottom Ash Complex is provided in Appendix I. The field and laboratory data were gathered during a subsurface investigation coordinated by GA in 2009. The field data includes detailed borehole logs and results of in-situ testing (i.e., standard penetration testing). Laboratory data provided in Appendix I includes: (1) grain size distributions, (2) Atterberg limits test results, (3) unconfined compressive strength test results, and (4) triaxial compressive strength test results.

AEP monitors four standpipe piezometers, at the Bottom Ash Complex facility, monthly. Results of instrumentation monitoring are collected and summarized in annual inspection reports.

Locations of the site boreholes/piezometers are shown on the Site Plan View drawing in Appendix IV.

HYDRAULICS AND HYDROLOGY

Flood routing analyses were developed for the existing conditions at the Bottom Ash Complex using the *HEC-1* computer program, developed by the U.S. Army Corps of Engineers. Flood routing parameters and the *HEC-1* output are provided in Appendix II. In accordance with the 40 CFR Parts 257 and 261 (CCR Rules), the flood routing analyses were performed using the 1/2 PMP 6-hour storm event. A summary of the flood routing results is provided in Table 1.

TABLE 1
SUMMARY OF FLOOD ROUTING ANALYSES
FOR EXISTING CONDITIONS

Pond	Crest Elevation (ft, NAVD)	Design Storm	Principal Spillway/Overflow Structure Invert Elevation/Pool at Start of storm (ft, NAVD)	Peak Inflow (cfs)	Peak Outflow (cfs)	Peak Stage (ft, NAVD)	Minimum Freeboard (ft)
Bottom Ash	690'	1/2 PMP6-hour	681'	111.08	23.83	683.51	6.49
Clearwater	675'	1/2 PMP6-hour	664'	71.44	44.76	666.50	8.50

As shown in Table 1, the as-built Bottom Ash Pond and Clearwater Pond are capable of storing/routing the 1/2 PMP 6-hour storm event, while providing at least 3 feet of freeboard for the minimum embankment crest elevations of 690 feet, NAVD and 675 feet, NAVD respectively. Note that the storm routing analyses assume a constant, peak inflow of 7.5 million gallons per day from plant processes, in addition to the storm runoff.

SLOPE STABILITY ANALYSES

General

The computer program *SLOPE/W*, developed by GEO-SLOPE International, Ltd., was used to perform slope stability analyses on two critical embankment profiles for the as-built Bottom Ash Complex. Specifically, the Morgenstern-Price limit equilibrium method was applied in the slope stability analyses. The slope stability analyses were conducted for the as-built Bottom Ash Complex Profiles SP1-SP1 and SP2-SP2. Locations of the critical profiles are shown on the

CERTIFICATION STATEMENT

Based on the site inspections, review of construction monitoring and periodic inspection data, the results of the field and laboratory testing of the materials used in the embankment construction, and our review of the as-built embankment geometry; it is our opinion that the embankments within the Bottom Ash Complex have slope stability factors of safety that meet or exceed the requirements in the CCR Rules. Furthermore, based on our review of the as-built embankment geometries, current operating pool levels, and the existing spillway and overflow system; we believe that the facility is capable of storing/routing the runoff from the 1/2 PMP 6-hour storm event.

Accordingly, I hereby certify that the Bottom Ash Complex is generally maintained in good condition and the facility generally meets the stability requirements in the CCR Rules. It should be clearly noted that this certification is not a legal guarantee. This certification is merely a statement by a registered professional engineer that, to the best of his knowledge, the facility was generally constructed according to the approved plan and that it meets the applicable stability requirements set forth in the CCR Rules. No warranties, expressed or implied, are provided. If you have any questions regarding the information provided, please contact me at 865-584-0344.

Clear Water Pond

SUMMARY OF INFLOW HYDROGRAPH
AND FLOOD ROUTING THROUGH
MITCHELL CLEAR WATER POND
FOR ½ 6-HOUR PMP STORM EVENT

Starting Pool Elevation	=	664 ft, NAVD
Pipe Spillway Invert Elevation	=	664 ft, NAVD
Crest Elevation	=	675 ft, NAVD
Peak Inflow	=	71.44 cfs
Peak Outflow	=	44.76 cfs
Peak Storage	=	5.65 ac-ft
Maximum Impoundment Level During Storm	=	666.50 ft, NAVD
Minimum Freeboard During Storm	=	8.50 ft

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HEC1GS, HEC1DB, AND HEC1KW.

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE.
THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRAN77 VERSION
NEW OPTIONS: DAMBREAK OUTFLOW SUBMERGENCE , SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY,
DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL LOSS RATE:GREEN AND AMPT INFILTRATION
KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM
